

Plan of approach:

For the GATO project by Robbe van der Lee, Mike Schaatsbergen en Matthijs Berghuis

Weekly planning:

Week 1

- Begin designs (Interactieontwerp, Technisch ontwerp)
- Begin documentation (backlog, Plan)
- Begin debriefing

Week 2

- Designs are done
- Documentatation is done
- Begin login page

Week 3

- Continue working on login page
- Home page
- Profile page

Week 4

- Continue working on profile page
- Login page is done
- Reclaim password process started

Week 5

- Reclaim password process is done
- Home en profile page are done

Week 6

- Final preperations (fix final errors)
- Prototype

Week 7

- Website is live.

DEADLINE 19 april

Design phases:

What:

We decided that we wanted to aim our website towards people between 16 and 25 years old. Our idea for the website is a minimalistic photo sharing platform because we noticed that a lot of the big social media's have tons of options while some people just want to share posts.

How:

We hope to reach our goal by careful design and good planning. This requires us to stick to the planning we made and not to be overeager to add new things.

Who:

Our design phase was shared with the entire team because we want to make something all of us can be proud of.

When:

We want to have our final designs before we start programming so the second week of our project will be all about designing.

How the functional components will work:

Home page:

Our home page will (depending on your screen) show 5 to 10 recent posts of the people who you follow. Above this you will find a text box and upload button to make your post. To the left of that we will show a small tab with the most trending tags and a tab with the newest posts. On the top of the page we have a small bar with the logo, the search, an upload button, a notifications button and a button to your profile page.

Login page:

On the login page you see a big logo with underneath the text fields for your username and password. On this page you will also find a button to sign up if you don't already have an account.

Profile page:

On the profile page you will find the full navigation menu (as described by the home page). Underneath that you will find the info about your profile or the profile you're visiting (profile picture, username, tag and bio). Underneath the profile info you will see three buttons. The posts button, this button shows the posts of that profile sorted by date. The favourites button, here you will be able to see all the favourites of this account. And last but not least the friends button, here you can see all the friends of this page.

Search page:

Once you have typed in what you're looking for you will see a page pop up with all the posts related to the tag you were looking for.

Realisation phases:

Design phase:

In the design phase the entire team will sit together to make all the designs we need. We will make the profile page, search page, home page, login page and sign up page.

Code phase:

In this phase the team will be busy with actually building our different pages. Hope fully without too much errors.

Debug phase:

In this phase we will be testing our website and fixing any errors we might have.

All these phases will be followed according to our planning on the first page.
